

Python Practice Questions On Functions

1. Write a function that inputs a number and prints the multiplication table of that number

```
9 * 1 = 9
9 * 2 = 18
9 * 3 = 27
9 * 4 = 36
9 * 5 = 45
9 * 6 = 54
9 * 7 = 63
9 * 8 = 72
9 * 9 = 81
9 * 10 = 90
```

2. Write a program to print twin primes less than 1000. If two consecutive odd numbers are both prime then they are known as twin primes

```
Twin Prime:
3 and 5
5 and 7
11 and 13
17 and 19
29 and 31
41 and 43
59 and 61
71 and 73
101 and 103
107 and 109
137 and 139
149 and 151
179 and 181
191 and 193
197 and 199
227 and 229
239 and 241
```

3. 3. Write a program to find out the prime factors of a number.
Example: prime factors of 56 - 2, 2, 2, 7

```
primeFactors(56)
```

Out[3]:
[2, 2, 2, 7]

4. Write a function that converts a decimal number to binary number

```
decToBin(11)
```

1011

5. A number is called perfect if the sum of proper divisors of that number is equal to the number. For example 28 is perfect number, since $1+2+4+7+14=28$. Write a program to print all the perfect numbers in a given range

```
perfectNums(0,100)
```

0

6

28
